Introducing New Radiant Heater for Harsh Environments Reznor Model VZH

O'Fallon, Missouri – Reznor, an industry-leading heating manufacturer, has launched a new gas-fired infrared heater (model VZH) that tackles corrosive and extreme environments.

Designed with durable components and construction, model VZH radiant heaters stand up against the most challenging environments, even winds up to 40 mph. VZH heaters are approved for indoor and outdoor spaces like car washes, garage bays, parking ramps, golf ranges, restaurant patios, and more. The heater, which features a stainless-steel burner, a totally-enclosed burner box with separate electrical and combustion compartments, and choice of parabolic-shaped stainless-steel or aluminum reflectors, provides long-lasting performance in the toughest environments.

VZH heaters offer design flexibility with a wide range of burner sizes (40,000 to 175,000 BTUh), tube lengths (10 to 60 feet), and layout options (straight, U-tube or L-shaped). The positive-pressure, single-stage burner and fully-automatic direct-spark electronic ignition control provide reliability. The heater is easy to service with onboard diagnostic capabilities and an external LED burner status indicator. The VZH heater includes a flexible gas line and a 24V thermostat connection. CSA design certified, VZH heaters are available in natural gas or LPG propane and are backed by an industry-leading 5-year warranty.

With over 130 years of experience in gas heating and air conditioning, Reznor manufactures a wide range of industrial, commercial, and residential HVAC solutions including makeup air, ventilating equipment, and electric and hydronic heaters. Visit www.reznorhvac.com to view the company's extensive product line.

Reznor is an enterprise of Madison Air, whose mission is to make the world safer, healthier, and more productive through the power of better air. Madison Air's advantage is using superior air to power positive change: a more productive workforce, reduced environmental footprint, decreased downtime, and assets protected and optimized for best performance.
