Introducing Model UWS Industry-Leading Hydronic Unit Heater

Unmatched combination of performance, reliability, flexibility, and appearance

O'Fallon, Missouri – Reznor, an industry-leading HVAC manufacturer, has launched a new hydronic suspended unit heater (model UWS) that enhances efficiency for commercial, industrial, institutional, agricultural, and residential spaces. Model UWS heaters improve building sustainability and reduce environmental impact when paired with a high efficiency boiler or hot water heat pump system, making it ideal for warehouses, shops, schools, greenhouses, garages, and other spaces.

The biggest advantage of the UWS is the industry's best heat exchanger design utilizing copper tubing to enhance performance and longevity over low-cost steel heat exchanger models. The fin spacing optimizes coil efficiency, reduces maintenance, maximizes flow area, and minimizes dust and debris.

With a clean, front-facing design, Model UWS is the only hydronic heater with water connections on the back of the unit keeping the front, top, and sides free of unsightly connections offering a true commercial aesthetic. Unlike competitive models, the UWS unit provides many options allowing directional control of the airflow from purely horizontal to purely vertical and all angles in between, thereby reducing inventory for distributors and offering superior flexibility for installers.

Specifically designed for use with lower inlet water temperatures, the UWS heating range optimizes application flexibility with 9 sizes from 10,000 to 191,000 BTUh at 140 °F entering water temperature. Each model's variable fan speed control operates between low and high settings to fine-tune air delivery, heating capacity, and sound. The 115V/1 phase totally-enclosed motor is protected against water spray providing ultimate safety and reliability. The UWS is ETL-certified to UL for use with both low temperature and medium temperature hot water applications.

With over 135 years of experience in gas heating and air conditioning, Reznor manufactures a wide range of HVAC solutions including makeup air, ventilating equipment, gas and electric radiant and unit heaters. Visit <https://www.reznorhvac.com> to view the company's extensive product line.

An enterprise of Madison Air, Reznor's mission is to enhance comfort, well-being, and productivity in buildings and homes with innovative heating solutions.
